WASTE COLLECTION MADE EASY AND AUTOMATIC

When a container is collected at a customer's site several questions arise.

What time was it collected, who collected it and did it fall within the legal load limit for the roads?

Installing a VEI scale allows all these questions to be answered as the skip is collected and with powerful reporting software, invoicing can be accelerated.

A simple programming process allows overload weight limits be set and an alert will let the driver know that the container is too heavy for the truck thus limiting overload fines.

In addition by weighing at the customer's site theft is minimised as the weights at collection and delivery can be compared.

VEI onboard weighing solutions provides a boost to productivity and a reduction in costs associated with waste collection.

USB
USB memory stick reader/writer
built-in as standard

OPTIONS

VPRINT
Thermal high speed printing for your reporting
on truck loads and production

WIRELESS DATA TRANSMISSION

TRACKWEIGHT
Quad-band cellular modem

WIFI MODEM

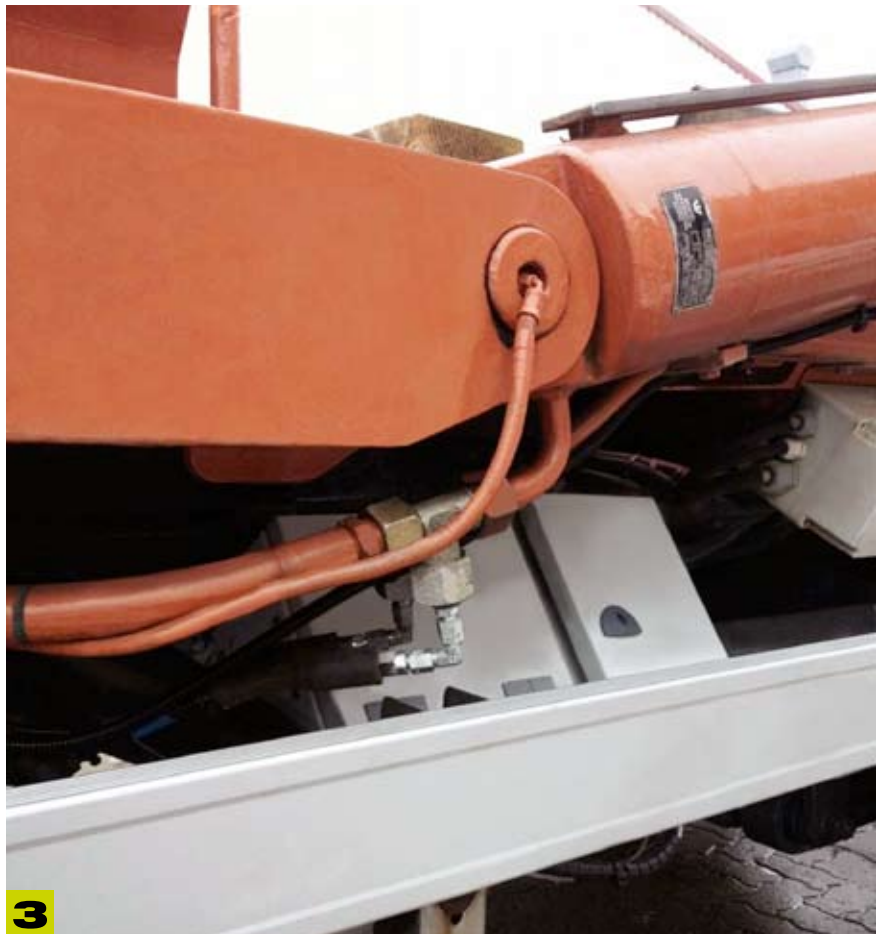

IPOWEB
Payload Monitoring Software

2

Contactless weighing zone sensor for weight reading

3

Load sensors to know the lifting pressure
